INTELLIGENT VOICED-BASED MACHINE CONTROL

This paper presents the results of the pilot survey of the acoustic models obtained from the database containing different types of texts, created for the needs of the first LVCSR system for Polish. Additionally, background information about the design of the database is presented along with the description of the applied methods of the corpus construction and current statistics of the database contents. The applications of voice actuation for intelligent machine control are discussed.

The project is supported by The Polish Scientific Committee (Project ID: R00 035 02).
